CS720

Logical Foundations of Computer Science

Lecture 15: Program verification (part 2)

Tiago Cogumbreiro

Why are we learning this?

In this class we are learning about three techniques:

- formalize the PL semantics (eg, formalize an imperative PL)
- prove PL properties (eg, composing Hoare triples)
- verify programs (eg, proving that an algorithm follows a given specification)

Summary

- Consequence Theorem
- Conditional Theorem
- While-Loop Theorem
- Axiomatic Hoare Logic

Theorems help us structure our proofs

```
Goal {{ (fun st : state \Rightarrow st X = 2) [X | \rightarrow X + 1] [ X | \rightarrow 1] }} X ::= 1;; X ::= X + 1 {{ fun st \Rightarrow st X = 2 }}.
```

Two alternative proofs

```
Proof.
   apply hoare_seq
    with (Q:=(fun st ⇒ st X=2)[X |→ X+1]). {
    apply hoare_asgn.
   }
   apply hoare_asgn.
Qed.
```

```
Proof.
  unfold hoare_triple.
  intros st_in st_out runs H_holds.
  invc runs.
  invc H1.
  invc H4.
  reflexivity.
Qed.
```

```
Goal \{\{ \text{ fun st} \Rightarrow \text{True } \}\}\ X := 1; X := X + 1 \{\{ \text{ fun st} \Rightarrow \text{st } X = 2 \} \}.
```

What if the pre-does not match H-asgn?

```
Goal \{\{ \text{ fun st} \Rightarrow \text{True } \}\}\ X := 1; X := X + 1 \{\{ \text{ fun st} \Rightarrow \text{st } X = 2 \} \}.
```

Provable, but not using H-asgn and H-seq.

and still use H-asgn and H-seq?

How can we prove these results

Let us build a theory on assertions

- Define A implies assertion B, notation A woheadrightarrow B, if, and only if, for any state s, $A(s) \implies B(s)$.
- Define assertion equivalence between A and B, notation $A \longleftrightarrow B$, if, and only if, $A(s) \iff B(s)$ for any state s.

1.
$$\{x = 3\} \rightarrow \{x = 3 \lor x \le y\}$$

- Define A implies assertion B, notation A woheadrightarrow B, if, and only if, for any state s, $A(s) \implies B(s)$.
- Define assertion equivalence between A and B, notation $A \longleftrightarrow B$, if, and only if, $A(s) \iff B(s)$ for any state s.

1.
$$\{x = 3\} \rightarrow \{x = 3 \lor x \le y\}$$

$$2.\{x \neq x\} \rightarrow \{x = 3\}$$

- Define A implies assertion B, notation A woheadrightarrow B, if, and only if, for any state s, $A(s) \implies B(s)$.
- Define assertion equivalence between A and B, notation $A \iff B$, if, and only if, $A(s) \iff B(s)$ for any state s.
- 1. $\{x = 3\} \rightarrow \{x = 3 \lor x \le y\}$
- 2. $\{x \neq x\} \to \{x = 3\}$
- $3. \{x \leq y\} \iff \{x < y \lor x = y\}$

- Define A implies assertion B, notation A woheadrightarrow B, if, and only if, for any state s, $A(s) \implies B(s)$.
- Define assertion equivalence between A and B, notation $A \iff B$, if, and only if, $A(s) \iff B(s)$ for any state s.

1.
$$\{x = 3\} \rightarrow \{x = 3 \lor x \le y\}$$

$$2.\{x \neq x\} \rightarrow \{x = 3\}$$

$$3. \{x \leq y\} \iff \{x < y \lor x = y\}$$

$$4. \{x = 2[x \mapsto x + 1][x \mapsto 1]\} \iff \{\top\}$$

- Define A implies assertion B, notation A woheadrightarrow B, if, and only if, for any state s, $A(s) \implies B(s)$.
- Define assertion equivalence between A and B, notation $A \iff B$, if, and only if, $A(s) \iff B(s)$ for any state s.

1.
$$\{x = 3\} \rightarrow \{x = 3 \lor x \le y\}$$

2.
$$\{x \neq x\} \to \{x = 3\}$$

$$\exists. \{x \leq y\} \iff \{x < y \lor x = y\}$$

4.
$$\{x = 2[x \mapsto x + 1][x \mapsto 1]\} \iff \{\top\}$$

```
Goal ((fun st \Rightarrow st X = 2) [X | \rightarrow X + 1] [ X | \rightarrow 1]) \iff (fun st \Rightarrow True). Proof. unfold assn_sub, assert_implies; auto. Qed.
```

1.
$$\{\mathbf{y} = \mathbf{1}\}\ x := 1; x := x + 1 \ \{x = 2\}$$

We know that $\{\top\}$ x:=1; x:=x+1 $\{x=2\}$ holds.

1. $\{\mathbf{y}=\mathbf{1}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\}$ \to $\{\top\}$

- 1. $\{\mathbf{y}=\mathbf{1}\}\ x:=1; x:=x+1\ \{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\} \twoheadrightarrow \{\top\}$
- 2. $\{\mathbf{x} = \mathbf{10}\}\ x := 1; x := x + 1\ \{x = 2\}$

- 1. $\{\mathbf{y}=\mathbf{1}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\}$ \twoheadrightarrow $\{\top\}$
- 2. $\{\mathbf{x}=\mathbf{10}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{x}=\mathbf{10}\}$ \to $\{\top\}$

- 1. $\{\mathbf{y}=\mathbf{1}\}\ x:=1; x:=x+1\ \{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\} \twoheadrightarrow \{\top\}$
- 2. $\{\mathbf{x}=\mathbf{10}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{x}=\mathbf{10}\}$ \to $\{\top\}$
- 3. $\{\top\} \ x := 1; x := x + 1 \ \{x = 2 \land \mathbf{y} = \mathbf{1}\}\$

- 1. $\{\mathbf{y}=\mathbf{1}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\}$ \twoheadrightarrow $\{\top\}$
- 2. $\{\mathbf{x}=\mathbf{10}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{x}=\mathbf{10}\}$ \to $\{\top\}$
- 3. $\{\top\}$ x:=1; x:=x+1 $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ Does NOT hold. Strengthen post-condition: $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ \twoheadrightarrow $\{x=2\}$

- 1. $\{\mathbf{y}=\mathbf{1}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\}$ \twoheadrightarrow $\{\top\}$
- 2. $\{\mathbf{x}=\mathbf{10}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{x}=\mathbf{10}\}$ \to $\{\top\}$
- 3. $\{\top\}$ x:=1; x:=x+1 $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ Does NOT hold. Strengthen post-condition: $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ \twoheadrightarrow $\{x=2\}$
- $4. \{\top\} \ x := 1; x := x + 1 \{\top\}$

- 1. $\{\mathbf{y}=\mathbf{1}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\}$ \twoheadrightarrow $\{\top\}$
- 2. $\{\mathbf{x}=\mathbf{10}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{x}=\mathbf{10}\}$ \to $\{\top\}$
- 3. $\{\top\}$ x:=1; x:=x+1 $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ Does NOT hold. Strengthen post-condition: $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ \rightarrow $\{x=2\}$
- 4. $\{\top\}$ x:=1; x:=x+1 $\{\top\}$ Holds. Weaken post-condition: $\{x=2\}$ \twoheadrightarrow $\{\top\}$

- 1. $\{\mathbf{y}=\mathbf{1}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\}$ \to $\{\top\}$
- 2. $\{\mathbf{x}=\mathbf{10}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{x}=\mathbf{10}\}$ \rightarrow $\{\top\}$
- 3. $\{\top\}$ x:=1; x:=x+1 $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ Does NOT hold. Strengthen post-condition: $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ \rightarrow $\{x=2\}$
- 4. $\{\top\}$ x:=1; x:=x+1 $\{\top\}$ Holds. Weaken post-condition: $\{x=2\}$ \twoheadrightarrow $\{\top\}$
- 5. $\{\top\}$ $x := 1; x := x + 1 \{\bot\}$

- 1. $\{\mathbf{y}=\mathbf{1}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{y}=\mathbf{1}\}$ \to $\{\top\}$
- 2. $\{\mathbf{x}=\mathbf{10}\}$ x:=1; x:=x+1 $\{x=2\}$ Holds. Strengthen pre-condition: $\{\mathbf{x}=\mathbf{10}\}$ \rightarrow $\{\top\}$
- 3. $\{\top\}$ x:=1; x:=x+1 $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ Does NOT hold. Strengthen post-condition: $\{x=2 \land \mathbf{y}=\mathbf{1}\}$ \rightarrow $\{x=2\}$
- 4. $\{\top\}$ x:=1; x:=x+1 $\{\top\}$ Holds. Weaken post-condition: $\{x=2\}$ \twoheadrightarrow $\{\top\}$
- 5. $\{\top\}$ x:=1; x:=x+1 $\{\bot\}$ Does NOT hold. Strengthen post-condition: $\{\bot\}$ \twoheadrightarrow $\{x=2\}$

Proving H-cons

```
Theorem hoare_consequence_pre : forall (P P' Q : Assertion) c,
  \{\{P'\}\}\} c \{\{0\}\}\} \rightarrow
  P \implies P' \implies
  {{P}} c {{Q}}.
Theorem hoare_consequence_post : forall (P Q Q' : Assertion) c,
  \{\{P\}\}\} c \{\{0'\}\}\} \rightarrow
  0' \rightarrow 0 \rightarrow
  {{P}} c {{0}}.
Theorem hoare_consequence : forall (P P' Q Q' : Assertion) c,
  \{\{P'\}\}\ c\ \{\{0'\}\}\ \to
  P \rightarrow P' \rightarrow
  0^{\circ} \implies 0 \implies
  {{P}} c {{0}}.
```

Exercise

```
Goal {{fun st \Rightarrow True}}
   X := 1; X := X + 1
   {{fun st \Rightarrow st X = 2}}.
```

Theorem (H-cond): If $\{P\}$ c_1 $\{Q\}$ and $\{P\}$ c_2 $\{Q\}$, then $\{P\}$ **if** b **then** c_1 **else** c_2 $\{Q\}$.

```
Theorem hoare_cond: forall P Q b c1 c2, \{\{P\}\}\ c1\ \{\{Q\}\}\ \rightarrow \\ \{\{P\}\}\ c2\ \{\{Q\}\}\ \rightarrow \\ \{\{P\}\}\ if\ b\ then\ c1\ else\ c2\ \{\{Q\}\}.
```

Prove that

$$\frac{\{\top\}\ y:=2\ \{x\leq y\}\quad \{\top\}y:=x+1\{x\leq y\}}{\{\top\}\ ext{if}\ x=0\ ext{then}\ y:=2\ ext{else}\ y:=x+1\ \{x\leq y\}} ext{H-cond}$$

Proving else:

$$\begin{array}{c} \cdots \\ \hline \{\top\} \twoheadrightarrow \{x \leq y[y \mapsto x+1]\} & \overline{\{x \leq y[y \mapsto x+1]\}y ::= x+1\{x \leq y\}} \text{H-asgn} \\ \hline \{\top\}y ::= x+1\{x \leq y\} & \text{H-cons-pre} \\ \hline \{\top\} \text{if } x=0 \text{ then } y ::= 2 \text{ else } y ::= x+1 \{x \leq y\} \end{array}$$

Proving else:

$$\frac{\cdots}{\{\top\}\twoheadrightarrow\{x\leq y[y\mapsto x+1]\}} \frac{\cdots}{\{x\leq y[y\mapsto x+1]\}y::=x+1\{x\leq y\}} \text{H-asgn} \\ \frac{\{\top\}y::=x+1\{x\leq y\}}{\{\top\}\text{if } x=0 \text{ then } y::=2 \text{ else } y::=x+1 \{x\leq y\}} \text{H-cond}$$

Proving **then**:

$$\cfrac{???}{\{\top\}\ y ::= 2\ \{x \leq y\}} \\ \hline{\{\top\} \text{if } x = 0 \text{ then } y := 2 \text{ else } y := x+1\ \{x \leq y\}} \\ \text{H-cond}$$

Proving else:

$$\frac{\cdots}{\{\top\} \twoheadrightarrow \{x \leq y[y \mapsto x+1]\}} \qquad \frac{\cdots}{\{x \leq y[y \mapsto x+1]\}y ::= x+1\{x \leq y\}} \text{H-asgn}} \text{H-cons-pre} \\ \frac{\{\top\}y ::= x+1\{x \leq y\}}{\{\top\} \text{if } x=0 \text{ then } y ::= 2 \text{ else } y ::= x+1\{x \leq y\}} \text{H-cond}$$

Proving **then**:

$$rac{???}{\{ op\}\ y::=2\ \{x\leq y\}} = \{ op\}$$
 $\{ op\}$ if $x=0$ then $y:=2$ else $y:=x+1\ \{x\leq y\}$

We are missing that x=0, which would help us prove this result!

The Hoare theorem for If

Theorem (H-if): If $\{P \wedge b\}$ c_1 $\{Q\}$ and $\{P \wedge \neg b\}$ c_2 $\{Q\}$, then $\{P\}$ if b then c_1 else c_2 $\{Q\}$.

Example

```
Goal
   {{fun st \Rightarrow True}}
   if X = 0
   then Y := 2
   else Y := X + 1
   {{fun st \Rightarrow st X \leq st Y}}.
```

1. $\{P\}$ while b do c end $\{P\}$

- 1. $\{P\}$ while b do c end $\{P\}$
- 2. $\{P\}$ while b do c end $\{P \land \neg b\}$ We know that b is false after the loop. Can we state something about the body of the loop?

- 1. $\{P\}$ while b do c end $\{P\}$
- 2. $\{P\}$ while b do c end $\{P \land \neg b\}$ We know that b is false after the loop. Can we state something about the body of the loop?
- 3. If $\{P\}$ c $\{P\}$, then $\{P\}$ while b do c end $\{P \land \neg b\}$ We know that the loop body must at least preserve $\{P\}$. Why? Can we do better?

- $1.\{P\}$ while b do c end $\{P\}$
- 2. $\{P\}$ while b do c end $\{P \land \neg b\}$ We know that b is false after the loop. Can we state something about the body of the loop?
- 3. If $\{P\}$ c $\{P\}$, then $\{P\}$ while b do c end $\{P \land \neg b\}$ We know that the loop body must at least preserve $\{P\}$. Why? Can we do better?

Theorem (H-while): If $\{P \wedge b\}$ c $\{P\}$, then $\{P\}$ while b do c end $\{P \wedge \neg b\}$.

```
Theorem hoare_while : forall P b c, \{\{fun\ st\Rightarrow P\ st\ /\ bassn\ b\ st\}\}\ c\ \{\{P\}\}\} \rightarrow \{\{P\}\}\} while b do c end \{\{fun\ st\Rightarrow P\ st\ /\ \sim\ (bassn\ b\ st)\}\}\}. Proof. unfold hoare_triple; intros.
```

Example

Recap

- ullet We introduced Hoare triples $\{P\}\ c\ \{Q\}$ as a framework to specify programs
- We introduced a set of theorems (syntax-oriented) to help us prove results on Hoare triples.

Hoare Logic Theory

$$\{P\} \ \text{skip} \ \{P\} \ (\text{H-skip}) \qquad \{P[x \mapsto a]\} \ x ::= a \ \{P\} \ (\text{H-asgn})$$

$$\frac{\{P\} \ c_1 \ \{Q\} \qquad \{Q\} \ c_2 \ \{R\} \}}{\{P\} \ c_1; c_2 \ \{R\}} (\text{H-seq})$$

$$\frac{P \twoheadrightarrow P' \qquad \{P'\} \ c \ \{Q'\} \qquad Q' \twoheadrightarrow Q}{\{P\} \ c \ \{Q\}} (\text{H-cons})$$

$$\frac{\{P \land b\} \ c_1 \ \{Q\} \qquad \{P \land \neg b\} \ c_2 \ \{Q\} \}}{\{P\} \ \text{if} \ b \ \text{then} \ c_1 \ \text{else} \ c_2 \ \{Q\}} (\text{H-if})$$

$$\frac{\{P \land b\} \ c \ \{P\} }{\{P\} \ \text{while} \ b \ \text{do} \ c \ \text{end} \ \{P \land \neg b\}} (\text{H-while})$$

Hoare Logic as an Axiomatic Logic

- The set of theorems in slide 12 can describe Hoare's Logic axiomatically
- Necessary condition (sound): $extbf{hoare_proof}(P,c,Q) o \{P\} \ c \ \{Q\}$
- Sufficient condition (complete): $\{P\}\ c\ \{Q\} o exttt{hoare_proof}(P,c,Q)$

```
Inductive hoare_proof : Assertion → com → Assertion → Type :=
| H_Skip : forall P, hoare_proof P (SKIP) P
| H_Asgn : forall Q V a, hoare_proof (assn_sub V a Q) (V ::= a) Q
| H_Seq : forall P c Q d R, hoare_proof P c Q → hoare_proof Q d R → hoare_proof P (c;;d) R
| H_If : forall P Q b c1 c2,
| hoare_proof (fun st ⇒ P st /\ bassn b st) c1 Q →
| hoare_proof (fun st ⇒ P st /\ ~(bassn b st)) c2 Q →
| hoare_proof P (IFB b THEN c1 ELSE c2 FI) Q
| H_While : forall P b c,
| hoare_proof (fun st ⇒ P st /\ bassn b st) c P →
| hoare_proof P (WHILE b DO c END) (fun st ⇒ P st /\ ~ (bassn b st))
| H_Consequence : forall (P Q P' Q' : Assertion) c,
| hoare_proof P' c Q' → (forall st, P st → P' st) → (forall st, Q' st → Q st) → hoare_proof P c Q.
```

Summary

- Consequence Theorem
- Conditional Theorem
- While-Loop Theorem
- Axiomatic Hoare Logic
